Giấc mơ đưa
sứ dưỡng sinh
đến hàng triệu gia đình Việt

*Macrobiotic porcelain is named after its special features meaning "brings health to consumers".
"Macrobiotic" itself means having a nourishing life*

After 14 years of investigation, Mr. Ly Ngoc Minh sought an answer for an outstanding product line, through which great food could be cooked to be delicious like in his mother clay's pot, but never drains, cracks or glazes. The invention of macrobiotic porcelain pots was not only the realization of Minh's childhood dream (making pots that are both great and durable for cooking), but also a dedication after many years of living a healthy lifestyle. With macrobiotic porcelain, food are cooked by infrared, not heat conduction. After the hear absorption phase, strong infrared wavelength was emitted to help cook food from inside out. The infrared wavelength is enhanced, help cook food faster, more thoroughly without damaging the food structure.

Sau 14 năm nghiên cứu tỉ mỉ, người thợ gốm sứ Lý Ngọc Minh đã sáng tạo ra một dòng nồi sứ hoạt động theo cơ chế khác biệt bằng tia hồng ngoại, tốt cho sức khỏe. Nồi sứ dưỡng sinh không chỉ hiện thực hóa giấc mơ từ bé của ông Minh, đó còn là tâm huyết đúc kết sau nhiều năm ông tự áp dụng lối sống lành mạnh, ăn uống dưỡng sinh cho chính bản thân mình. Với nồi sứ dưỡng sinh, thực phẩm được nấu chín bằng tia hồng ngoại thay vì cơ chế dẫn truyền nhiệt như các sản phẩm khác. Sau khi nồi sứ dưỡng sinh hấp thụ nhiệt, các bước sóng hồng ngoại mạnh sẽ được phát ra để làm chín thực phẩm từ bên trong. Bước xạ hồng ngoại được tăng cường tối đa, giúp thực phẩm chín sâu, chín đều và cấu trúc thực phẩm không bị phá vỡ
